Cascading Style Sheets: Designing for the Web (3rd Edition) By Hakon Wium Lie, Bert Bos

Since 1996, CSS (Cascading Style Sheets) has been the standard language for describing the layout of Web pages. This classic, fully four-color book explains how to use the latest release of the CSS language, with clear and practical examples for each CSS language element. And more than just the "how," the book also explains the "why" behind the design of each CSS element, ensuring that readers have the understanding they need to create their own CSS libraries. The foreword is written by Jeffrey Zeldman, author of *Designing with WebStandards* and *Taking Your Talent to the Web*.

Since its introduction in 1996, Cascading Style Sheets (CSS) has revolutionized web page design. Now, in 2004, most web pages use CSS, and many designers base their layouts entirely on CSS. To do so successfully requires a good understanding of how CSS works. The purpose of this book is to describe how designers can take full advantage of CSS 2.1, which is the newly released update of the specification.

CSS's journey from an idea to a specification—and then on to a specification designers can rely on—has been long and arduous. The creator of the CSS Zen Garden (described in Chapter 12, "From HTML extensions to CSS") describes it this way:

Littering a dark and dreary road lay the past relics of browser-specific tags, incompatible DOMs, and broken CSS support. Today, we must clear the mind of past practices. Web enlightenment has been achieved thanks to the tireless efforts of folk like the W3C, WaSP and the major browser 1 creators.

Indeed, we believe the web is a more enlightened place now that CSS have matured to a stage where it can be used for advanced layouts in a range of browsers. This book will tell you all you need to know to start using CSS.
