**Rock-Forming Minerals, Volume 4A: Framework Silicates - Feldspars** By  
William Alexander Deer, R. A. Howie, J. Zussman

This major revision takes place 38 years after the publication of the first edition. This volume in the second edition of the series Rock-forming Minerals is devoted entirely to the feldspar minerals. The text has been completely re-written and very much expanded, incorporating the advances in knowledge and understanding arising from the new and improved techniques for the study of minerals that have developed over the decades between editions. The authors have maintained the general approach used in the other volumes, summarising important research results and presenting them in an organised fashion. Readership: Rock-forming Minerals is a standard reference work for professionals in mineralogy, petrology and geochemistry, as well as having a wide appeal as a reference work for postgraduate research students and research workers in related fields.

Also available:

Rock Forming Minerals 3B: Layered Silicates Excluding Micas and Clay  
Minerals - ISBN 1862392595

Non-Silicates: Sulphates, Carbonates, Phosphates, Halides - ISBN 189779990X

The Geological Society of London

Founded in 1807, the Geological Society of London is the oldest geological society in the world, and one of the largest publishers in the Earth sciences.

The Society publishes a wide range of high-quality peer-reviewed titles for academics and professionals working in the geosciences, and enjoys an enviable international reputation for the quality of its work.

The many areas in which we publish in include:

- Petroleum geology
- Tectonics, structural geology and geodynamics
- Stratigraphy, sedimentology and paleontology
- Volcanology, magmatic studies and geochemistry
- Remote sensing

- History of geology
- Regional geology guides
