Marsden's Book of Movement Disorders Online By Ivan Donaldson, C. David Marsden, Susanne A. Schneider, Kailash P. Bhatia

'Marsden's Book of Movement Disorders' represents the final work of the late Professor C. David Marsden, who was the most influential figure in the field of movement disorders, in terms of his contributions to both research and clinical practice, in the modern era. It was conceived and written by David Marsden and his colleague at the Institute of Neurology, Prof. Ivan Donaldson. It was their intention that this would be the most comprehensive book on movement disorders and also that it would serve as the 'clinical Bible' for the management of these conditions. It provides a masterly survey of the entire topic, which has been made possible only by vast laboratory and bedside experience.

The coverage of this comprehensive online resource includes the full breadth of movement disorders, from the underlying anatomy and understanding of basal ganglia function to the diagnosis and management of specific movement disorders, including the more common conditions such as Parkinson's Disease through to very rare conditions such as Niemann-Pick disease. Chapters follow a structured format, featuring historical overviews, definitions, clinical features, differential diagnosis, investigations and treatment covered in a structured way. Figures include many original photographs and diagrams of historical significance, which can all be downloaded as PowerPoint presentations. Among these illustrations are still images of some original film clips of some of Dr. Marsden's patients published here for the first time.

Comprehensively referenced, with links through to primary research journal articles, and updated by experts from the Institute of Neurology at Queen Square, 'Marsden's Book of Movement Disorders' is a valuable reference for movement disorder specialists and researchers, as well as clinicians who care for patients with movement disorders.

Editorial Review

Review

"The authors have painstakingly reviewed the extant literature on each of their subjects, including the earliest known references and those published in languages other than English. There are several excellent texts on movement disorders currently available, some in their third or fourth edition. Whereas those are particularly useful for medical students, neurology residents, and general neurologists, Marsden's Book of Movement Disorders will become the text of choice for movement disorder specialists and serve as a reliable guide to the knowledge of movement disorders from antiquity until 2012 for future generations." -- A. Van Gerpen, Neurology

About the Author

Charles David Marsden was Professor of Neurology at the Institute of Neurology/Neurosurgery at Queen Square and a leading figure in the study of Movement Disorders. Among his many significant scientific contributions were the pioneering of evoked responses, and transcranial electrical and magnetic stimulation as methods of demonstrating conduction in neuronal pathways, and establishing the existence and importance of long latency reflexes in maintaining posture. Together with Professor Stanley Fahn, of the Neurological Institute in New York, he founded the Movement Disorder Society and its scientific journal Movement Disorders. He died in 1998.

Ivan Donaldson is on the Board of Directors of the Van der Veer Institute for Parkinson's Disease and Brain Research, Christchurch, New Zealand, and was for many years affiliated with the Institute of Neurology and Neurosurgery at Queen Square, UK. He was Associate Professor at the Christchurch School of Medicine and Consultant Neurologist at Christchurch Hospital.

Kailash Bhatia is a Professor of Clinical Neurology in the Sobell Department of Movement Neuroscience at the Institute of Neurology and an Honorary Consultant Neurologist at the National Hospital for Neurology, London.

His main research interest is in movement disorders, specifically the merging of clinical, electrophysiological and imaging methods to provide insights into the pathophysiology of conditions like dystonia and Parkinson's disease.

Susanne A. Schneider worked for three years in the field of movement disorders at the National Hospital for Neurology and Neurosurgery, Queen Square, London. In her PhD thesis she studied the clinical and electrophysiological aspects of genetic movement disorders, leading to more than thirty publications. She is currently working at the Interdisciplinary Center of Genetic Movement Disorders and the Department of Clinical and Molecular Neurogenetics at the Department of Neurology, University of Lübeck, Germany.

Users Review

From reader reviews:

Ruth Beasley:

This Marsden's Book of Movement Disorders Online is great book for you because the content that is full of information for you who also always deal with world and get to make decision every minute. That book reveal it facts accurately using great arrange word or we can declare no rambling sentences inside. So if you are read the item hurriedly you can have whole details in it. Doesn't mean it only offers you straight forward sentences but challenging core information with beautiful delivering sentences. Having Marsden's Book of Movement Disorders Online in your hand like getting the world in your arm, information in it is not ridiculous one. We can say that no reserve that offer you world in ten or fifteen small right but this e-book already do that. So , it is good reading book. Hey there Mr. and Mrs. stressful do you still doubt which?
