Wind Loading of Structures By John D. Holmes

Bridging the gap between wind and structural engineering, *Wind Loading of Structures* demonstrates the application of wind engineering principles to ensure maximum safety in a variety of structures. This book will assist the practising engineer in understanding the principles of wind engineering, and provide guidance on the successful design of structures for wind loading by gales, hurricanes, typhoons, thunderstorm downdrafts and tornados. The principles of meteorology, statistics and probability, aerodynamics and structural dynamics are covered in the first half of the book. The second half describes, qualitatively and quantitatively, the nature of wind loads on all types of structures, including low-rise and tall buildings, large stadium roofs, towers and chimneys, bridges, transmission lines, free-standing walls and roofs, and antennae. Special features include coverage of extreme winds in tropical and sub-tropical climates, wind-tunnel testing techniques, a summary of the wind climates of over sixty countries, and detailed coverage of internal as well as external wind pressures on buildings. A comparison is made of the provisions for wind loads in six major national and international codes and standards. Examples and case studies are given in each chapter that make the book suitable for supporting university graduate courses in wind loading and response.

Editorial Review

Review

'A fine text for a wind engineering course and a useful reference for the practising wind engineer... a must have for any wind engineer's library.'

- *The Wind Engineer*

About the Author

John D. Holmes is a consulting engineer and researcher, with over thirty years international experience in research, teaching and consulting in the wind loading of structures.

Users Review

From reader reviews:

Robert Gibson:

Now a day people that Living in the era everywhere everything reachable by interact with the internet and the resources inside it can be true or not involve people to be aware of each info they get. How a lot more to be smart in acquiring any information nowadays? Of course the answer is reading a book. Reading through a book can help folks out of this uncertainty Information specially this Wind Loading of Structures book because book offers you rich facts and knowledge. Of course the information in this book hundred pct guarantees there is no doubt in it you may already know.

David Hoag:

Hey guys, do you desires to finds a new book to see? May be the book with the title Wind Loading of Structures suitable to you? Often the book was written by renowned writer in this era. The book untitled Wind Loading of Structures is the main one of several books this everyone read now. This book was inspired a number of people in the world. When you read this reserve you will enter the new dimensions that you ever know ahead of. The author explained their strategy in the simple way, therefore all of people can easily to comprehend the core of this e-book. This book will give you a large amount of information about this world now. In order to see the represented of the world on this book.

Bernard Kovach:

The e-book untitled Wind Loading of Structures is the guide that recommended to you to study. You can see the quality of the guide content that will be shown to anyone. The language that author use to explained their ideas are easily to understand. The writer was did a lot of research when write the book, to ensure the information that they share for your requirements is absolutely accurate. You also might get the e-book of

Wind Loading of Structures from the publisher to make you a lot more enjoy free time.

Sandra Easley:

A lot of guide has printed but it is unique. You can get it by online on social media. You can choose the most effective book for you, science, comedian, novel, or whatever by simply searching from it. It is referred to as of book Wind Loading of Structures. Contain your knowledge by it. Without leaving behind the printed book, it could add your knowledge and make an individual happier to read. It is most crucial that, you must aware about book. It can bring you from one destination for a other place.
